Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

- (Currently Amended) A computer program product for execution by a server computer for performing resource pool size maintenance for an application server, comprising: computer code for triggering a resource pool shrink check;
 - computer code for determining that pool shrinking is necessary;
 - computer code for reducing resources that have been determined to be at least one of not created successfully and not able to be refreshed in an unavailable deque; and computer code for reducing resources that have been determined to be available in an available deque.
- 2. (Original) The computer program product of claim 1 wherein said computer code for triggering a resource pool shrink check includes:
 - computer code for determining that a period of time has expired; and computer code for performing the resource pool shrink check at the expiration of the period of time.
- 3. (Original) The computer program product of claim 2 wherein the period of time is set by a programmable attribute.
- 4. (Currently Amended) The computer program product of claim 1 wherein said computer code for determining that pool shrinking is necessary includes:
 - <u>computer code for detecting resources contained in an the available deque or a the unavailable deque.</u>
- 5. (Original) The computer program product of claim 1 wherein computer code for

determining that pool shrinking is necessary includes:

computer code for determining the number of resources in the resource pool is greater than a maximum resource pool threshold value.

- 6. (Original) The computer program product of claim 5 wherein the maximum resource pool threshold value is set by a programmable attribute.
- 7. (Original) The computer program product of claim 1 wherein computer code for reducing resources in an unavailable deque includes:

computer code for reducing resources in an unavailable deque to coincide with a maximum unavailable resources threshold.

- 8. (Original) The computer program product of claim 7 wherein the reduced resources in the unavailable deque are destroyed.
- 9. (Original) The computer program product of claim 1 wherein computer code for reducing resources in an available deque includes:

computer code for reducing resources in an available deque to coincide with a maximum available resources threshold.

- 10. (Original) The computer program product of claim 9 wherein resources in the available deque are destroyed.
- 11. (Currently Amended) A computer program product for execution by a server computer for performing resource pool maintenance for an application server, comprising:

computer code for triggering a test for pool resources;

computer code for <u>determining</u> whether at least one of the resources is functioning <u>properly by</u> performing a test on pool resources; and

computer code for refreshing pool resources based on the pool resources testing.

12. (Original) The computer program product of claim 11 wherein said computer code for triggering a test for pool resources includes:

computer code for determining that a period of time has expired; and computer code for performing the resource pool shrink check at the expiration of the period of time.

13. (Currently Amended) The computer program product of claim 11 wherein said <u>computer</u> <u>code for determining whether at least one of the resources is functioning properly by performing a test on pool resources includes:</u>

computer code for determining if pool resources are functioning properly, wherein the resources are refreshed if they are refreshing resources determined to not be functioning properly.

- 14. (Currently Amended) A computer program product for execution by a server computer for performing maintenance on connection pool deques in an application server, comprising: computer code for traversing an unavailable deque of resources that have been determined to be at least one of not created successfully and not able to be refreshed and a reserved deque of resources that are allocated; computer code for performing maintenance on the unavailable deque; and computer code for performing maintenance on the reserved deque.
- 15. (Original) The computer program product as claimed in claim 14 wherein said computer code for traversing an unavailable and a reserved deques includes:

computer code for determining what resources are available in the unavailable deque and the reserved deques.

- 16. (Original) The computer program product as claimed in claim 14 wherein said computer code for performing maintenance on the unavailable deque includes:
 - computer code for scheduling resource creation for each resource in the unavailable deque.
- 17. (Original) The computer program product as claimed in claim 14 wherein said computer code for performing maintenance on the reserved deque includes:

computer code for scheduling resource creation for each resource in the reserved deque.

18. (Currently Amended) A computer program product for execution by a server computer for performing resource creation in a connection pool in an application server, comprising: computer code for generating a resource in connection pool;

computer code for confirming the generation of the resource determining that the resource was created successfully in the connection pool; and

- computer code for moving the resource to an available deque; if when successful generation of the resource is confirmed, otherwise moving the resource to an unavailable deque for tracking resources that are not created successfully.
- 19. (Original) The computer program product of claim 18 further comprising: computer code for determining that a period of time has expired; and computer code for generating a resource at the expiration of the period of time.
- 20. (Currently Amended) A computer program product for performing resource pool maintenance, comprising:

computer code for determining that pool shrinking is necessary;

computer code for removing unavailable resources that have been determined to be at

least one of not created successfully and not able to be refreshed from an

unavailable deque of a resource pool; and

computer code for removing available resources from an available deque of the resource pool.
